# Deploy it YOUR way: On-Prem or Cloud

## You Ask - We Deliver

When we set out to create EventPro, one big priority was a cloud application – a frequent request of current AND prospective clients.

We still offer an on-prem edition (installed on your desktop/network), so that everyone can access EventPro their way.

## Options for Everyone

While the cloud is a great option for many organizations, we know that others still prefer to work from on-premises (desktop/network installed) applications.

We don't want to hold anyone back from the benefits of EventPro, so we're offering both options: On-Prem & Cloud. All EventPro applications have the same functionality, so you can choose *your* best option.

## The Cloud Advantage

When working at their best, cloud software allows businesses to become more mobile and adaptable to changing circumstances.

- **Convenience:** You can access EventPro **anytime** and **anywhere** with an internet-connected device. With the days of the 9-5/Mon-Fri office rapidly disappearing, workplace **flexibility** is a big advantage.
- **Collaboration:** Even if you and your colleagues work in separate locations and at different times, you are all collaborating in the **same data** that is always updated in **real time**.
- **Easy to Manage:** With a cloud application, you don't have to deal with maintenance, installation, server setup, downloading updates, and so on. You always have access to the **latest version** by simply logging in.

# What devices can I use EventPro Cloud on?

Powerful & flexible EventPro Cloud software is delivered seamlessly through the cloud to any device with a solid internet connection. That means EventPro Cloud is fully functional on the following systems & devices:

Windows

iOS

iPhone & iPad

Chrome OS

Linux

Mac

Android Phone & Tablet

HTML 5

**How Does it Work?** EventPro Cloud is Enterprise-level software designed to run on computer servers. It runs through the EventPro Active Directory, and uses Citrix, the undisputed standard in remote network and software delivery.

## Reliable and Secure

## Your files - wherever you are!

With the delivery method used by EventPro Cloud, you'll have easy access to your local network drives, files, and printers. Not all cloud systems can do this, and this is a key selection criteria when evaluating different cloud options.

EventPro Cloud is housed in multiple data centers located around the globe in order to meet the data residency and security needs of our clients in different regions.

EventPro Cloud runs on a Private Cloud Environment that is hosted on a Skyhigh Enterprise-Ready certified system. Skyhigh Networks performs objective and thorough evaluations of the enterprise-readiness of cloud service based on a detailed set of criteria developed in conjunction with the Cloud Security Alliance (CSA). Services designated as Skyhigh Enterprise-Ready are the services receiving the highest CloudTrust™ Ratings, which fully satisfy the most stringent requirements for data protection, identity verification, service security, business practices, and legal protection.

All data centers have successfully completed SOC 1 Type II audits in compliance with the Statement on Standards for Attestation Engagements 18 (SSAE 18) auditing standards. The EventPro Cloud application and data are housed in a Private Cloud that is hosted in a data center located within a Tier 4 remote facility.

## Your OWN Database

Have you heard the term *Multi-Tenant*? It means *multiple* companies have their data stored in the same database. That doesn't sound ideal to us, so that's why every client has their OWN database in EventPro Cloud.

All updates are still rolled out seamlessly to all of our clients in a simple process. You just get the added security of knowing that your data is sitting in your own dedicated EventPro database.

## Choose What's Best for You

Every organization is unique, so not everyone agrees on the best software delivery method. Your EventPro Solutions Consultant will be happy to discuss the pros and cons of the On-Prem (desktop/network installed) and Cloud options in relation to your business, with our unbiased recommendation.

### EventPro On-Prem

#### INSTALLATION

**Need to install on your computer or server**

#### UPDATING

**Need to manually update on computer or server**

#### PROCESSING

**Workstation requires high memory & processing speed**

#### DATA STORAGE

**Stored on your computer or server**

#### SECURITY

**Controlled internally by your IT**

#### ACCESS

**From local computer or workstation on the network**

### EventPro Cloud

#### INSTALLATION

**Not required - runs in the cloud**

#### UPDATING

**Not required - updated by service provider**

#### PROCESSING

**Most processing done by service provider**

#### DATA STORAGE

**Stored on cloud service provider's server**

#### SECURITY

**Controlled by cloud service provider**

#### ACCESS

**From any device with internet access**

(e.g. smartphone, tablet, laptop, computer)
